

Project 1: Your personal home page

Start Assignment

- Due Jan 27 by 1:59am
- Points 235
- Submitting a website url

In this assignment you will be implementing your homepage using vanilla HTML5, CSS3 and ES6+. This should be a front-end only static page, so you shouldn't be using a backend or any components libraries. You cannot use jQuery, and all you JS code must be in ES6 modules.

Also, remember that you need to provide a creative addition to your page, something that will differentiate it from every other page. It can be implemented using ES6+ or HTML+CSS alone if you wish. e.g. My homepage has a honeycomb grid of project images, where each image is a link that takes you to the project.

Potential Rubric

Design document including at least: * Project description * User Personas * User stories (use cases but with a story) * Design mockups	80
Is the page a good homepage? does it include meaningful information	15
https://northeastern.instructure.com/courses/245751/assignments/2625048#  https://northeastern.instructure.com/courses/245751/assignments/2625048# Use ES6 modules Use type="module" in the package.json file, and use type="module" in any html scripts e.g.: ... <script type="module" src="./js/main.js"></script> ...	5
Is it deployed in a public page?	5
Does it include an original component that differentiates it from other homepage	5
Are the CSS, JS and Images and other resources organized in different folders	5
Does the page include meta information for author, description, icon?	5
The student implemented an original JS functionality with more than 5 lines of code. Including libraries doesn't count	5
The page is formatted using Prettier	5
The page is W3C Compliant, doesn't throw any error in https://validator.w3.org/  https://validator.w3.org/	5
Uses the class eslint config file and it doesn't throw any error	5
All images have an alt value	5

Does it include at least 2 html pages with different URLs, and a third AI generated page	5
Does it use classes for identifying elements	5
Doesn't use non standard tags for accomplishing tasks that should be done with standard components? e.g. Buttons implemented with divs or spans	5
Does it include a clear and organized CSS without important	5
Does it use a grid, either Bootstrap 5+ or flexbox	5
Clear and descriptive README including: * Author * Class Link * Project Objective * Screenshot * Instructions to build	5
Does it include a package.json file listing all the dependencies of the project	5
Does it use MIT license	5
Does it include a short public and narrated video demonstrating the application	15
Is the google Form submission correct (thumbnail displays correctly, and links work as well)	5
Describe the use of GenAI tools if any. Provide what models were used, versions, prompts, and how it was used. Add this as a section in your readme	10
Completes the code review	20
